Figure S1. Critical depth-pressure curves for building classes A0, A and B with brick widths of 0.25 m subjected to Newtonian flow. Peak normal pressures and corresponding depths applied to each city block are plotted as points for each flow rate.

Figure S2. Critical depth-pressure curves for building classes A0, A and B with brick widths of 0.25 m subjected to a hyperconcentrated flow. Peak normal pressures and corresponding depths applied to each city block are plotted as points for each flow rate.

10

Figure S3. Critical depth-pressure curves for building classes A0, A and B with brick widths of 0.25 m subjected to a debris flow. Peak normal pressures and corresponding depths applied to each city block are plotted as points for each flow rate.
