

## **Preface**

As we mentioned in the preface of the special issue of *Natural Hazards and Earth System Sciences* (Volume 1, Number 1/2, 2001), several submitted papers had not completed the peer review procedure at the date of the edition. At that time we expressed our intention to publish them in a supplementary volume as soon as they finish the peering review procedure. Now we present those papers in

this volume, offering thus to the reader a rather complete information about the scientific content of the session “Seismic Hazard Evaluation, Precursory Phenomena and Reliability” of the XXVI EGS General Assembly in Nice 2001.

P. F. Biagi and M. E. Contadakis (Guest Editors)
